

# QA Task: Test a Web page functionality

The purpose of this task is primarily to examine your problem solving skills. Do not expect too much hand-holding as this is an evaluation assignment.

## The Assignment

You must create the tests as UI ones, in any of the preferred format: MS Word\Excel or open office.

1) Create at least 5 UI tests for the following User story:

```
Feature: BWell Testing task
  As a User who is interested in CMS platforms
  I want to create Appointments
  So that I can plan my activities at "http://login.myappcms.com/build"
```

2) Prepare your own tests (a few) for the rest of the Web site's functionality.

## The Solution

Use the DyiAppDesigner Demo account as described here:

<https://diyappdesigner.com/cms-demo-account/>

When ready please send your test solution archived in ZIP format, ideally the structure should look like the following:

**<Your\_Name\_Manual\_QA>.zip**

**<Your\_Name\_Manual\_QA>.zip / TestCases** file containing created UI tests

**<Your\_Name\_Manual\_QA>.zip / Report** file which will be a well documented Test Execution document along with Defects found, if any.
